

Mission statement

"We strengthen the development of our members' business relationship and information network, promote innovation, and facilitate contact with universities and research institutions in order to leverage the latest trends and developments. We enhance the visibility of additive manufacturing within the industry and among the general public, provide services for members and partners, and network with other bodies in Switzerland and internationally."

Who are we?

The **Swiss Additive Manufacturing Group (SAMG)** is an industrial sector within the Swissmem association. Any industrial partner in Switzerland and Liechtenstein that is a member of Swissmem and operates in the additive manufacturing field as a developer, planner, engineer, manufacturer, supplier, outfitter or service provider may join this industrial sector. Our membership structure represents every part of the additive manufacturing value chain.

What do we want to achieve?

The **SAMG** consolidates and coordinates the common interests of its members. In doing so, **SAMG** aims to promote the practice and further development of additive manufacturing as well as relevant education and training in Switzerland and Liechtenstein. Safeguarding its interests with regard to industry, science and politics as well as in terms of international legislation and standardization serves to consolidate and extend the significance of additive manufacturing. On an overarching level, we are helping to secure the future viability and competitiveness of business in Switzerland and Liechtenstein.

What do we do?

Through regular dialogue, **SAMG** cultivates the exchange of information between members and with other Swissmem industrial sectors, as well as with national and international bodies. We create and maintain framework conditions which promote the broad practice of additive manufacturing, and we are committed to innovation as well as to education and training.
